DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

I. Claims 1-7, 9, 11, and 14, drawn to a protein comprising SEQ ID NO: 1, a method of producing the protein, and a method of determining a ligand to the protein.

II. Claim 8, drawn to an antibody.

III. Claim 10, drawn to a method of screening a compound that alters the binding property between a ligand and protein.

IV. Claims 12 and 13, drawn to a pharmaceutical composition comprising a compound that alters the binding property between a ligand and the protein.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I is drawn to a protein comprising SEQ ID NO: 1, a method of producing the protein, and a method of determining a ligand to the protein, i.e., first product, first method of making first product, and first method of using first product.

Group II is drawn to an antibody, i.e., second product.

Group III is drawn to a method of screening a compound that alters the binding property between a ligand and protein, i.e., second method of using first product.

Group IV is drawn to a pharmaceutical composition comprising a compound that alters the binding property between a ligand and the protein, i.e., third product.

The products in Groups I, II, and IV have entirely different structures, and biological functions which are not interchangeable and which require non-cohesive searches and considerations. The method of Group III is a completely different method from the method of Group I as evidenced by their different method steps and different use.

The special technical feature in Group I is a protein, a method of producing the protein, and a method of determining a ligand to the protein.

The special technical feature in Group II is an antibody.

The special technical feature in Group III is to a method of screening a compound that alters the binding property between a ligand and protein.

The special technical feature in Group IV is a pharmaceutical composition comprising a compound that alters the binding property between a ligand and the protein.

Therefore, Groups I-IV are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept. Thus, unity of invention is lacking and restriction is appropriate.
